

## Testing Lab 4

### Supplied Output Files

The x7 and xflip3 files will be used for most of the grading.

The regular lab 4 will be compared against l4.x7.reliable for things like ball color names, correct numbers, and formatting.

The l4.x7.partlyU.txt file will be compared to output from labs that have unreliable ball allocation but still use the library linked list code. (Such labs will lose points for not having linked list code or for not having it do unreliable allocation.)

The l4.x7.fullyU.txt file will be compared to output from labs that have unreliable ball allocation for balls and for nodes.

L4.xflip3.txt is there to test text output with flippers.

Graphics and bonus mode get tested with xinf.pdb as before.
